550,000+
SERVED DAILY

IMAGINE INITIATIVE

Imagine hundreds of thousands of school children, teachers, and their families having access to clean, safe water for the first time ever! The Imagine Initiative represents Hydrating Humanity's effort to help every public school in the Trans Mara Region of Kenya gain access to clean water. Of the first 79 schools surveyed in this area, only two have any water at all. That is about to change! We are excited to present this opportunity to make an impact together!

Each of the deep water wells needed for these schools will cost \$12,000 and be drilled by our capable staff using our truck mounted drill rig. Your sponsorship of a school (whether in part or in full) will change the course of countless lives and leave a lasting legacy for years to come.

433 MILLION
school days are lost each

THE HYDRATING HUMANITY DIFFERENCE

Lifetime Warranty: We have a rigorous maintenance program in place to guarantee every pump we install remains in working order for the life of the well.

Local People Solving Local Problems: Our staff in Africa are almost all native Africans - local men and women who grew up in the areas we are serving.

Water & Hygiene: Clean water alone is only 15% effective at eliminating waterborne disease. When we add hygiene education that statistic rockets to 75%. That's why we always do both!

HELPING SCHOOLS

Providing schools access to safe, clean water is one of the most impactful projects that you can do. Without clean water it is very difficult to keep attendance up, help kids focus on studies and provide the necessary framework for ongoing health that children can pass down to their children.

THE RIPPLE EFFECT

Clean water changes everything...little did we know how many things are impacted when a school or community has safe water to drink.

Women & Girls: The primary responsibility of collecting water for family survival belongs to women and girls. Morning and evening hours are typically spent walking miles to collect water that is dirty and diseased. Another sad reality is that women and girls put themselves at risk of sexual assault while walking to collect water.

Predatory men sometimes wait along these well traveled paths. A clean water source close to home changes this! In addition, girls stay in school, women can spend more time providing for the family, pregnancy complications decrease, birth survival rates increase and overall women's health is drastically improved!

Nearly **2,000 CHILDREN** under five die everyday from waterborne disease & poor sanitation/hygiene.

LIVING WATER

Hydrating Humanity exists to demonstrate God's love for people. One way we share God's love is by showing the full length movie, The Jesus Film. We have the capability of showing this impressive two hour movie in their own language. This film tells the story of how much God loves them through the life, ransom and resurrection of Jesus Christ.

In addition to meeting their natural needs with clean water and hygiene education, the Jesus Film provides another visual display of how much we love them and God loves them.

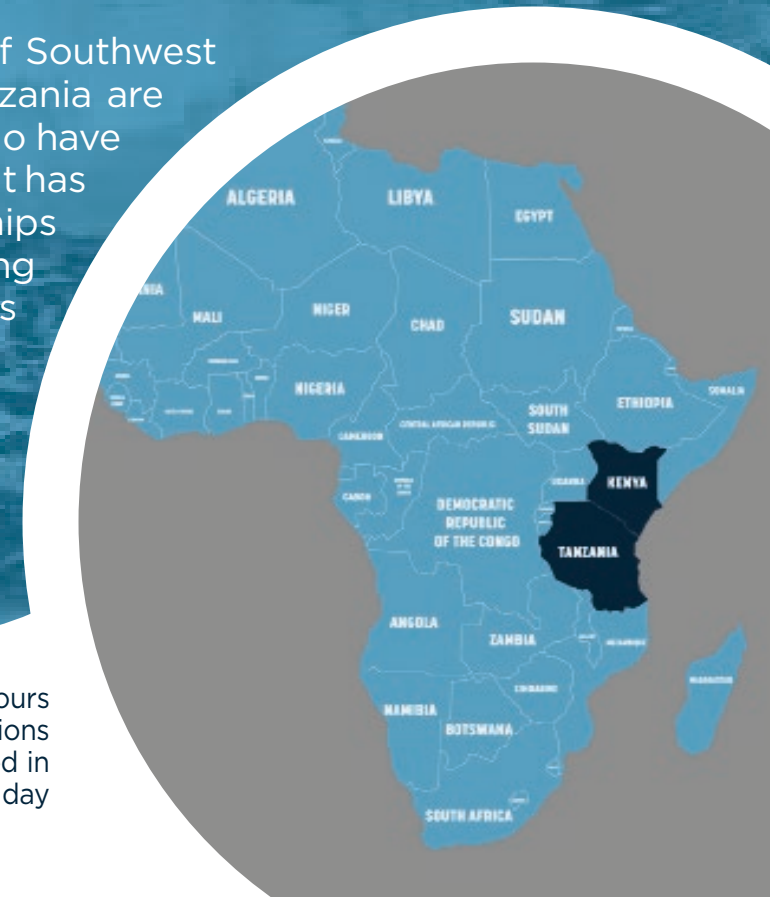

WHERE WE WORK

Since 2005 our focus has been in East Africa. Specifically, Kenya and Tanzania.

The Trans Mara Region of Southwest Kenya and Northwest Tanzania are home to the Maasai Tribe who have lived there for over 1000 years. It has taken time to develop relationships and trust but with an invested, long term approach we've seen incredible things happen. Our goal is to completely eradicate the waterborne disease crisis in this region. Helping schools with clean water will impact every child and family towards that end.

Since 2005, Hydrating Humanity and other organizations like ours have made great progress helping people in developing nations get access to clean water. We believe this crisis can be solved in our lifetime. We look forward to celebrating this reality one day and hope you'll join us in this movement.

- Founder Matt Peterson

A black and white photograph of a group of African children and a man. The children are in the foreground, smiling and looking towards the camera. They are standing in front of a water pump structure. A man is standing to the right, also smiling. The background shows some trees and a bucket labeled 'VESTA'.
